

## How Does it Work?

The **Weiss Walkie™** wraps around your dog's barrel and attaches to his or her buckle collar. When the dog pulls, the Walkie™ applies slight pressure, calming and relaxing the dog and naturally decreasing forward movement.

- 1** Clip the clasp to your dog's collar, just like a regular lead and bring metal ring to the top.

## Will it Fit My Dog?

The Walkie™ comes in two sizes. The small size fits most dogs under **25 pounds**, while the large fits most dogs up to **150 pounds**.

- 2** Wrap the lead around the dog's chest and place the leash handle through the metal ring.

*"My dog Daisy and I now walk with mutual enjoyment. With a regular leash her hound nose pulled her every which way along the nature trail, dragging me behind. Head halter devices made it easy for me but unpleasant for Daisy. With the Weiss Walkie™, Daisy walks with her head up and tail wagging and I follow with a smile, no more dragging, tugging or pulling."*

- Darlene Larson, Regional Manager for the ASPCA National Shelter Outreach

- 3** The Walkie should look like the image to the left when correctly attached.
